## **Greetings from Department of Physiology, St Johns Medical College, Bengaluru!**

With the new CBME curriculum for medical undergraduates, electives have become an integral part of medical teaching. Designing and implementing useful and relevant electives which are also interesting to the students can be a challenge, especially in pre and para clinical subjects. This national level CME programme is an attempt in steering the teaching faculty of pre and para clinical departments towards successful implementation of electives by experts in their respective domains. The sessions will be designed to help participants understand the purpose of electives, the steps of planning and conducting the electives and their importance in career development of both the student and faculty. With a panel discussion focusing on the challenges in implementing the electives, the CME will be interesting and a fine learning experience for us all!
